Namespace Aplib.Core

Classes

BdiAgent<TBeliefSet>

Represents an agent that performs actions based on goals and beliefs.

<u>CircularArray<T></u>

An array that wraps around when it reaches its end. Functionally works like a queue with indexing.

Metadata

Data structure to store information about a component which may be useful for debugging or logging.

Interfaces

IAgent

Defines an agent that can play a game.

ICompletable

Defines an object that can be completed.

Enums

CompletionStatus

Represents the state of a completable object.
